University of New South Wales – Bachelor of Medical Studies (awarded for completing 4 years) 2025

University of New South Wales – Bachelor of Medical Studies / Doctor of Medicine Discontinued 2025

James Ruse Agricultural High School – High School Certificate. 99.65 ATAR, All-rounders List 2016

- Relevant Coursework: Software Design & Development (90) 2014, Maths Ext 1 (100), Maths Ext 2 (95)

Projects

sang53.github.io

Warehouse Inventory App Express / Typescript / PostgreSQL / Passport.js github.com/sang53/Warehouse-Inventory

- Incorporated CRUD operations for managing warehouse inventory and automated task generation from orders.
- Integrated authentication with session management using Passport.js (local strategy).
- Structured the backend into modular controllers, services, models and views for maintainability.
- Handled concurrent task completion updates through PostgreSQL transactions.
- Developed basic server-side rendering with EJS view engine.

3D Spheres Background React / TypeScript / Three.js / react-three-fiber

github.com/sang53/Spheres3D

- Designed and developed an interactive 3D background for a personal portfolio website.
- Implemented physics-based orbiting movement around the cursor with raycasting for collisions.
- Added themes and background toggling, with optimised re-renders for smooth performance.
- Created a dynamic spotlight that tracks the cursor, with directional lighting based on the active theme.

Shopping Page React / React Router / CSS Modules / Vitest / React Testing Library

github.com/sang53/ShoppingPage

- Built a e-commerce single page app using data from Fake Store API, with a persistent shopping cart across routes.
- Developed a custom state reducer to manage product and quantity updates within the cart.
- Used React Router for client-side routing, including splat routes for 404 handling.
- Wrote comprehensive unit tests for components, hooks and contexts.

Battleships JavaScript / CSS / HTML / webpack

github.com/sang53/battleships

- Built a fully functional web version of the Battleships game with CPU and sharescreen modes.
- Implemented complete game logic: ship placement, attacks, turn handling, and win conditions.
- Developed an AI for CPU that adapts targeting strategy based on successful hits and ship orientation on multiple hits.

Skills

Programming Languages: JavaScript, TypeScript, HTML, CSS, SQL

Frontend: React, Vite, React Router, React Testing Library, Vitest

Backend: Node.js, Express.js, PostgreSQL, Passport.js, EJS

Experience

Warehouse Assistant, Best & Less DC – Eastern Creek, NSW

FEB 2024 – OCT 2024

- Adhered to safety & company protocols while fulfilling KPIs and minimising errors

Medical Student, UNSW – Sydney, NSW

Jan 2017 – DEC 2023

- Collaborated with medical teams in daily ward rounds to ensure optimal patient management
- Communicated with patients in a structured and comprehensible manner to gather relevant medical information
- Engaged in self-directed learning, proactively seeking opportunities and engaging in self-reflection to ensure continuous improvement

Private HSC Maths Tutoring – Sydney, NSW

Jan 2017 – DEC 2022

- Identified learning obstacles and devised methods to help students overcome challenges
- Structured and planned lessons for students to achieve their learning goals within designated timeframes
